Passage 1

On Thursday afternoon Mrs. Clarke, dressed for going out, took her handbag with her money and her key in it, locked the door and went to the club. She always went there on Thursdays. It was a nice outing for an old woman who lived alone.

At six o'clock she came home, let herself in and at once smelt cigarette smoke. Cigarette smoke in her house? How? How? Had someone got in? She checked the back boor and the windows. All were locked or fastened, as usual. There was no sign of forced entry.

Over a cup of tea she wondered whether someone had a key that fitted her front door--“a master key” perhaps. So she stayed at home the following Thursday. Nothing happened. Was anyone watching her movements? On the Thursday after that she went out at her usual time, dressed as usual, but she didn’t go to the club. Instead she took a short cut home again, letting herself in through her garden and the back door. She settled down to wait.

It was just after four o'clock when the front door bell rang. Mrs. Clarke was making a cup of tea at the time. The bell rang again, and then she heard her letter-box being pushed open. With the kettle of boiling water in her hand, she moved quietly towards the front door. A long piece of wire appeared through the letter box, and then a hand. The wire turned and caught around the knob in the door-lock. Mrs. Clarke raised the kettle and poured the water over the hand. There was a shout outside, and the skin seemed to drop off the fingers like a glove. The wire fell to the floor, and the hand was pulled back. Mrs. Clarke heard the sound of running feet.

Passage 3

In the 1960s, medical researchers Thomas Holmes and Richard Rahe developed a checklist of stressful events. They appreciated the tricky point that any major change can be stressful. Negative events like “serious illness of a family member” were high on the list, but so were some positive life-changing events, like marriage. When you take the Holmes-Rahe test you must remember that the score does not reflect how you deal with stress—it only shows how much you have to deal with. And we now know that the way you handle these events dramatically affects your chances of staying healthy.

By the early 1970s, hundreds of similar studies had followed Holmes and Rahe. And millions of Americans who work and live under stress worried over the reports. Somehow, the research was described briefly in a memorable message. Women's magazines ran headlines like "Stress causes illness!" If you want to stay physically and mentally healthy, the articles said, avoid stressful events.

But such simple advice is impossible to follow. Even if stressful events are dangerous, many--like the death of a loved one--are impossible to avoid. Moreover, any warning to avoid all stressful events is a prescription(处方) for staying away from opportunities as well as trouble. Since any change can be stressful, a person who wanted to be completely free of stress would never marry, have a child, and take a new job or move.

The notion that all stress makes you sick also ignores a lot of what we know about people. It assumes we're all weak and passive in the face of difficulties. But what about human initiative and creativity? Many people who come through periods of stress with more physical and mental energy than they had before. We also know that a long time without change or challenge can lead to boredom, and physical and mental strain.

41. Holmes-Rahe made a medical research on ____.
- A. what to do to avoid stress
 - B. what to do to cope with stress
 - C. what kind of events can cause stress
 - D. what kind of stress can cause changes
42. The score of the Holmes-Rahe test shows ____.
- A. how much you have to deal with stress
 - B. how positive events can change your life
 - C. how negative events can change your life
 - D. how you can deal with life-changing events
43. The studies on stress in the early 1970s made people ____.
- A. feel more stressful in working and living
 - B. believe that it's impossible to avoid stress
 - C. worry about their mental and physical health
 - D. believe that it's possible to avoid stressful events
44. If a person wanted to avoid stress completely, he would have to ____.
- A. avoid any changes
 - B. make some changes
 - C. be free of dangerous things
 - D. stay away from the opportunities
45. Which of the following best describes the writer's tone in the passage?
- A. Critical.
 - B. Objective.
 - C. Subjective.
 - D. Prejudiced.

Passage 4

Even plants can run a fever, especially when they're under attack by insects or disease. But unlike humans, plants can have their temperature taken from 3,000 feet away--straight up. A decade ago, adapting the infrared(红外线) scanning technology developed for military purposes and other satellites, physicist Stephen Paley came up with a quick way to take the temperature of crops to determine which ones are under attack. The goal was to let farmers precisely target pesticide(杀虫剂) spraying rather than rain poison on a whole field, which always includes plants that don't have pest(害虫) problems.

Even better, Paley's Remote Scanning Services Company could detect crop problems before they became visible to the eye. An infrared scanner, on a plane flying at 3,000 feet at night, measured the heat sent out by crops. The data was turned into a color-coded map showing where plants were running "fevers". Farmers could then spot-spray, using 50 to 70 percent less pesticide than they otherwise would.

The bad news is that Paley's company closed down in 1984, after only three years. Farmers resisted the new technology and long-term supporters were hard to find. But with the renewed concern about pesticides on produce, and refinements in infrared scanning, Paley hopes to get back into operation. Agriculture experts have no doubt about how the technology works. "This technique can be used on 75 percent of agricultural land in the United States", says George Oerther of Texas A & M. Ray Jackson, who recently retired from the Department of Agriculture, thinks long-distance infrared crop scanning could be adopted by the end of the decade, but only if Paley finds the financial support which he failed to obtain 10 years ago.

46. Plant will run a fever when they are ____.
- A. sprayed with pesticides
 - B. facing an infrared scanner
 - C. troubled with insects or disease
 - D. having their temperature taken
47. In order to apply pesticide spraying precisely, we can use infrared scanning to ____.
- A. draw a color-coded map
 - B. locate the problem area
 - C. attract insects and treat disease
 - D. estimate the damage to the crops
48. Farmers can save a considerable amount of pesticide by ____.
- A. making use of spot-spraying
 - B. transforming poisoned rain
 - C. consulting infrared scanning experts
 - D. detecting crop problems at an early stage
49. The difficulty in applying infrared scanning technology to agriculture is ____.
- A. its high cost
 - B. the financial problem
 - C. the decreased production
 - D. the lack of official support
50. The passage mainly talks about the ____.
- A. problems of crops
 - B. temperature of plants
 - C. roles of Paley's company
 - D. function of infrared scanning

Part III Cloze (15%)

Directions: *There are 15 blanks in the following passage. For each blank, there are four Choices. Choose the best answer and mark the corresponding letter on the Answer Sheet.*

A friend of mine met with an accident driving in darkness. His legs were so hurt that he couldn't move. What was the 51 was that he found himself unable to ask for help--his mobile phone went out of 52 because of exhausted battery. 53 could be done but to wait in cold wilderness. It was eight hours later that day broke, and then the rescue arrived.

It can 54 be imagined that he could stand the horror in the darkness for so long. Even more surprising was his 55: "First of all, I checked up my physical conditions and found myself not in mortal danger. As there was no tools to 56 help, I leaned back in my seat trying my best to 57 the wound from bleeding. In this way I dozed off."

His story put an end to my regret for the sadness of an exploration adventure that happened last year. A group of young men 58 to explore a mountain cave and got lost. 59 to find a way out in the dark cave they were frightened and ran anxiously without a sense of 60. Finally they fell dead in fear and exhaustion. According to the rescue people 61 found them, the place where they got lost was only about 10 meters

away from the 62 of the cave. If they stayed on the spot when they lost their way and tried to calm themselves, they would probably 63 a faint light glimmering not far away.

Don't you think you can compare it with life 64? When you meet with difficulty in life and work, and you are not clear about it yet, you 65 put up struggle immediately. It seems to be a negative attitude, but a person who can afford to do so must have foresight as a great courage in the first place.
